Module/Unit Objective Example QM Course Review
Here is the example I use when teaching about unit objectives/outcomes (from a QM Master Reviewer)

Think of module/unit objectives as breaking down concepts or skills into their component parts.

Here is a generic example:

Course Objective:
Serve a moist, delicious, chocolate cake

Module/Unit 1: Chocolate Cake

Unit Objectives:
1. Locate a desirable recipe
2. Gather required ingredients
3. Complete the steps in the recipe
4. Decorate the cake

So, if you looked at the module/unit objectives and saw “locate a desirable recipe,” you could match it to the course objective “serve a moist, delicious, chocolate cake” because locating a recipe is a smaller, specific step to follow in order to serve a cake.
